

ITP EXERCISES REVISED SPEC

05-Collections

"stdin" >>>> input()

"stdout" >>>> print()

Recipe

1. Create a new file named **05-recipe** with an extension of dot **py** for Python
2. Create an array named ingredients comprising the following values:
 - - chicken
 - - breadcrumbs
 - - salt
 - - garlic
 - - lime
3. Write "ORIGINAL" to stdout.
4. Write each ingredient to stdout.
NOTE: this is done one-at-a-time, for now.
It could and should look a bit wrong to have all this repeated code.
5. Replace the lime with lemon.
6. Add rocket.
7. Remove the salt.
8. Write "AFTER CHANGES" to stdout.
9. Write each ingredient to stdout again.
